

Introducing RadioRA3

Lutron raises the bar once again. 10 years in the making, RadioRA 3 is a new, game-changing system that promises to transform the way your residential clients look at connected lighting control.

WHAT'S NEW **Simply Beautiful**

RadioRA 3 brings the contemporary **light bar design** to a full range of connected residential products — dimmers with capacitive touch technology, switches and keypads. The enhanced functionality and new aesthetic of RA3 make it easier for your clients to say “yes” to adding lighting control to their home projects.

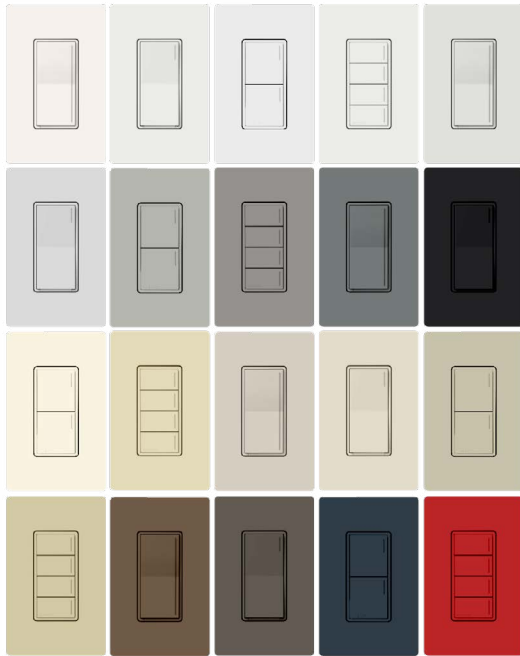

WHAT'S NEW

Wide Array of Colors

Available in **24** color options:

- 20 colors in Satin Finish (with 14 **NEW** colors in the palate)
- 4 colors in Gloss Finish

WHAT'S NEW

New Processor. Easier Installation.

All-in-one Processor that combines functionality of the main repeater and connect bridge of RadioRA 2

Backwards Compatible with RadioRA 2 & RA2 Select

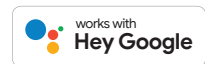

QuickFind Technology that makes locating the processor on the network during set up much easier.

Powered by PoE via cat5e (or better) cable from the network router

WHAT'S NEW

Streamlined Integration

Lutron works with **more connected brands** than any other dedicated lighting control or motorized shading system. RA3 now comes with Lutron's LEAP API which embeds system programming directly in the top control brands' design software, eliminating the need to do the programming twice and saving you hours to days of programming time.
