

Low-voltage transformer that connects to existing non-Ring landscape lighting via the Ring Bridge to enable smart controls and turn on lights with the Ring App. Includes quick connect terminals for wiring to low voltage landscape lights (up to 200 watts total). *

* Requires Ring Bridge for smart controls. Sold separately. One Ring Bridge per household.

Connectivity

Wireless Connection to Ring Bridge

Power

Plug into standard power outlet.
Quick connect terminals for wiring to 12V or 15V landscape lights (up to 200 watts total).

Dimensions

6 in x 7.8 in x 2.8 in

Operating Conditions

-4°F to 122°F (-20°C to 50°C)
Weather Resistant (Suitable for Wet Locations)

Features

Powers low-voltage landscape lights
Integrates with Ring system*
Smart security features*

Setup Requirements

Weatherproof Outdoor GFCI AC Power Outlet or
Indoor GFCI Outlet within 3ft. of
mounting location
Ring Bridge required to enable smart controls
and Ring App control

Add-Ons

Ring Bridge

The Ring Bridge enables smart controls from anywhere using the Ring app and lets Transformer interact with other Ring products and select Alexa-enabled devices for enhanced security.

Ring Motion Sensor

Extend the range of your Ring Smart Lights, Ring doorbells or cameras with a battery-powered motion sensor that connects to the Ring Bridge to activate devices whenever motion is detected even earlier than before.

Frequently Asked Questions

What is the Ring Bridge? Do I need to use the Transformer?

Ring Bridge is the central hub that integrates Ring Smart Lights, Motion Sensors, and Transformers into your Ring system. The Bridge connects to the Ring App using your home Wi-Fi network and connects to other Ring Smart Lighting products using a proprietary long-range communication protocol.

In addition, you can use your Ring App to create groups of Smart Lights and Ring cameras that work together to enhance security. For example, if you're subscribed to Ring Protect, your Ring Doorbell can begin recording video as soon as motion is detected by your Motion Sensor. This provides footage that captures motion events earlier.

Is the Transformer compatible with any Ring Video Doorbell models?

No. The Transformer is NOT compatible with any Ring Video Doorbell models and is meant to only connect your compatible low-voltage non-Ring landscape lights.

Do I need to hire an electrician to install the Transformer?

The Transformer and all of Ring's Smart Lighting products are designed for ease of installation. However, like all electrical appliances, the power will need to be shut off at the breaker during installation. If you do not know how to do this or are uncomfortable working with electrical wires, we recommend consulting a licensed electrician.

Do I need a Ring Protect subscription to use the Transformer?

No. The Transformer will power and connect Ring Smart Lighting and other light devices whether or not you are subscribed to Ring Protect. If however, you want your linked devices to record and save video images for any camera that was triggered, you will need a Ring Protect subscription.
