

FIRST ALERT[®] COMBINATION CARBON MONOXIDE & SMOKE ALARM

Separate sensors to detect smoke and a CO; the two alarm systems work independently
Powered by two "AA" batteries
Side access drawer for easy battery replacement

IMPORTANT! PLEASE READ CAREFULLY AND SAVE.
This user's manual contains important information about the combination Carbon Monoxide & Smoke Alarm's operation. If you are installing this Alarm for use by others, you must leave this manual— or a copy of it—with with your user.

Printed in Mexico **CONFORMS TO** Model ZCOMBO

All First Alert[®] and BRK[®] Smoke Alarms conform to regulatory requirements, including UL217 and are designed to detect particles of combustion, Smoke particles of varying number and size are produced in all fires.

Ionization technology is generally more sensitive than photoelectric technology at detecting small particles, which tend to be produced in greater amounts by flaming fires, which consume combustible materials rapidly and spread quickly. Sources of these fires may include paper burning in a wastebasket, or a grease fire in the kitchen.

Photoelectric technology is generally more sensitive than ionization technology at detecting large particles, which tend to be produced in greater amounts by smoldering fires, which may smolder for hours before bursting into flame. Sources of these fires may include cigarettes burning in couches or bedding.

For maximum protection, use both types of Smoke Alarms on each level and in every bedroom of your home.

INTRODUCTION

FIRE SAFETY TIPS
Follow these rules and prevent hazardous situations: 1) Use smoking materials properly. Never smoke in bed. 2) Keep matches or lighters away from children; 3) Store flammable materials in proper containers; 4) Keep electrical appliances in good condition and don't overload electrical circuits; 5) Keep stoves, barbecue grills, and gas furnaces clean and debris-free; 6) Never leave anything cooking on the stove unattended; 7) Keep portable heaters and open flames, like candles, away from flammable materials; 8) Don't use rubbish accumulating areas. Keep alarms clean, and test them weekly. Replace alarms immediately if they are not working properly. Smoke Alarms that do not work cannot alert you to a fire. Keep at least one working fire extinguisher on every floor, and an additional one in the kitchen. Have fire escape ladders or other reliable means of escape from an upper floor in case stairs are blocked.

BASIC SAFETY INFORMATION

IMPORTANT!
• Dangers, Warnings, and Cautions alert you to important operating instructions or to potentially hazardous situations. Pay special attention to these items.
• This Smoke/CO Alarm is approved for use in single-family residences. It is NOT designed for marine or RV use.

CAUTION!
• This combination Smoke/Carbon Monoxide Alarm has two separate alarms. The CO Alarm is not designed to detect fire or any other gas. It will only indicate the presence of carbon monoxide gas at the sensor. Carbon monoxide gas may be present in other areas. The Smoke Alarm will only indicate the presence of smoke that reaches the sensor. The Smoke Alarm is not designed to sense gas, heat, or flames.

WARNING!
• This Smoke/CO Alarm cannot operate without batteries.
Removing the batteries for any reason, or failing to replace the batteries at the end of their service life, removes your protection.
• NEVER ignore any alarm. See "If Your Smoke/CO Alarm Sounds" for more information on how to respond to an alarm. Failure to respond can result in injury or death.
• The Silence Features are for your convenience only and will not correct a problem. See "Using the Silence Features" for details. If you ever check your home for a potential problem after any alarm, you can react in an injury or death.

• Test this Smoke/CO Alarm once a week. If the Alarm ever fails to test correctly, have it replaced immediately! If the Alarm is not working properly, it cannot alert you to a problem.
• The product is intended for use in ordinary indoor locations of family living units. It is not designed to measure CO levels in compliance with Occupational Safety and Health Administration (OSHA) commercial or industrial standards. Individuals with medical conditions that may be affected by carbon monoxide or carbon monoxide may consider using warning devices which provide audible and visual signals for carbon monoxide concentrations under medical condition contact your physician.

FCC COMPLIANCE
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that the interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, you can attempt to correct the interference by turning the receiver off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that of the receiver.
- Consult the dealer or an experienced radio or TV technician for help.

WARNING!
Changes or modifications to the product, not expressly approved by First Alert / BRK Brands, Inc., could void the user's authority to operate the equipment.
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

INSTALLATION

WHERE TO INSTALL THIS ALARM
This combination Smoke/CO Alarm is recommended by the National Fire Protection Association (NFPA), is one Smoke Alarm on every floor, in every sleeping area, and in every bedroom (See "Regulatory Information For Smoke Alarms" for details on the NFPA recommendations).

For CO Alarms, the National Fire Protection Association (NFPA) recommends that a CO Alarm should be placed in each bedroom, outside of each separate sleeping area in the immediate vicinity of the bedrooms. For added protection, install additional CO Alarms in each separate bedroom, on every level of your home.

NOTE: For added protection, install an additional Smoke/CO Alarm at least 15 feet (4.6 meters) away from the furnace or fuel burning heat source where possible. In smaller homes or in manufactured homes where the Alarm is far away as possible from the furnace or other fuel burning source, installing the Alarm closer than 15 feet (4.6 meters) will not harm the Alarm, but may increase the response of unwanted alarms.

NOTE: Once the Smoke/CO Alarm is snapped onto the mounting bracket, the Alarm is far away as possible from the furnace or other fuel burning source. Installing the Alarm closer than 15 feet (4.6 meters) will not harm the Alarm, but may increase the response of unwanted alarms.

NOTE: To pair the ZCOMBO alarm to a Ring or other compatible Z-Wave network, download the appropriate App and follow the instructions to Set up Device or Connect Device.

IN GENERAL, INSTALL COMBINATION SMOKE AND CARBON MONOXIDE ALARMS:
• On every level of your home, including finished attics and basements.
• Inside every bedroom, especially if people sleep with the door partly or completely closed.
• In the hall near every sleeping area. If your home has multiple sleeping areas, install a unit in each. If a hall is more than 40 feet (12 meters) long, install a unit at each end.
• At the top of first-to-second floor stairs.
• At the bottom of the basement stairs.
• For additional coverage, install Alarms in all rooms, halls, and storage areas, where temperatures normally remain between 40° F and 100° F (4° C and 37.8° C).

RECOMMENDED PLACEMENT:

Smoke Alarm At or every level and in every bedroom

Carbon Monoxide Alarm On every level and in every bedroom

Fire Extinguisher One on every level, plus kitchen and garage

When installing on the wall, the top edge of Smoke Alarms should be placed between 4 inches (102 mm) and 12 inches (305 mm) from the wall/ceiling area. When installing on the ceiling, place the alarm as close to the center as possible.

In either case, install at least 4 inches (102 mm) from where the wall and ceiling meet. See "Avoiding Dead Air Spaces" for more information.

NOTE: For any location, make sure no door or other obstruction could keep carbon monoxide or smoke from reaching the Alarm.
Installing Smoke/CO Alarms in Mobile Homes
For minimum security, install one Smoke/CO Alarm as close to each sleeping area as possible. For more security, put one unit in each room. Many older mobile homes (especially those built before 1978) have little or no insulation. If your mobile home is not well insulated, or if you are unsure of the amount of insulation, it is important to install units on inside walls only.

WHERE THIS ALARM SHOULD NOT BE INSTALLED
DO NOT LOCATE THIS SMOKE/CO ALARM:
• In garages, furnace rooms, crawl spaces and unfinished attics.
• Avoid extremely dusty, dirty or greasy areas.

WHERE THIS ALARM SHOULD NOT BE INSTALLED
DO NOT LOCATE THIS SMOKE/CO ALARM (CONTINUED):
• Where combustion particles are produced. Combustion particles form when something burns. Areas to avoid include poorly ventilated kitchens, garages, and furnace rooms. Keep units at least 20 feet (6 meters) from the sources of combustion particles (stove, furnace, water heater, space heater) if possible. In areas where a 20-foot (6 meter) distance is not possible—in basements, mobile, or semi-trailers, for example—it is recommended the Smoke Alarm be placed far from these fuel-burning sources as possible. The placement recommendations are intended to keep these Alarms at a reasonable distance from a fuel-burning source, and thus reduce "unwanted" alarms. Unwanted alarms occur if a Smoke Alarm is placed directly next to a fuel-burning source. Ventilate these areas as much as possible.
• Within 5 feet (1.5 meters) of any cooking appliance. In air streams near kitchens. Air currents can draw cooking smoke into the smoke sensor and cause unwanted alarms.
• In extremely humid areas. This Alarm should be at least 10 feet (3 meters) from a shower, sauna, humidifier, vaporizer, dishwasher, laundry room, utility room, or other source of high humidity.
• In direct sunlight.
• In turbulent air, like near ceiling fans or open windows. Blowing air currents can draw cooking smoke into the smoke sensor and cause unwanted alarms.
• In areas where temperature is colder than 40° F (4.4° C) or hotter than 100° F (37.8° C). These areas include non-air-conditioned crawl spaces, unfinished attics, uninsulated or poorly insulated cellars, porches, and garages.
• In areas with dusted areas. Dust can block the sensor's sensing chamber.
• Less than 12 inches (305 mm) away from fluorescent lights. Electrical "noise" can interfere with the sensor.
• In "dead air" spaces. See "Avoiding Dead Air Spaces".

AVOIDING DEAD AIR SPACES
"Dead air" spaces may prevent smoke from reaching the Smoke/CO Alarm. To avoid dead air spaces, follow installation recommendations below.
On ceilings, install Smoke/CO Alarms as close to the center of the ceiling as possible. If it is not possible, install the Smoke/CO Alarm at least 4 inches (102 mm) from the wall or corner.
For wall mounting (if allowed by building codes), the top edge of Smoke/CO Alarms should be placed between 4 inches (102 mm) and 12 inches (305 mm) from the wall/ceiling line, below typical "dead air" spaces.

On a peaked, gabled, or cathedral ceiling, install first Smoke/CO Alarm within 3 feet (0.9 meters) of the peak of the ceiling, measured horizontally. Additional Smoke/CO Alarms may be required depending on the length, angle, and size of the ceiling's slope. Refer to NFPA 72 for details on requirements for sloped or peaked ceilings.

WEEKLY TESTING
WARNING!
• NEVER use an open flame of any kind to test this unit. You might accidentally damage or set fire to the unit or to your home. The built-in test switch accurately tests the unit's operation as required by Underwriters Laboratories, Inc. (UL). NEVER use smoke exhaust! Exhaust may cause permanent damage and voids your warranty.
• DO NOT connect the Alarm when the horn is sounding. Exposure at close range may be harmful to your hearing. When testing, step away when horns start sounding.

CAUTION!
It is important to test this unit every week to make sure it is working properly. Using the test button is the recommended way to test this Smoke/CO Alarm. You can test this Smoke/CO Alarm. Press and hold the Test/Silence button 3-5 seconds until unit starts to alarm. During testing, you will see and hear the following sequence:

1. The Horn will sound 3 beeps, pause, 3 beeps. The Power/Silence LED flashes RED.
2. The built-in test switch accurately tests the unit's operation as required by Underwriters Laboratories, Inc. (UL). NEVER use smoke exhaust! Exhaust may cause permanent damage and voids your warranty.
3. DO NOT connect the Alarm when the horn is sounding. Exposure at close range may be harmful to your hearing. When testing, step away when horns start sounding.

CAUTION!
It is important to test this unit every week to make sure it is working properly. Using the test button is the recommended way to test this Smoke/CO Alarm. You can test this Smoke/CO Alarm. Press and hold the Test/Silence button 3-5 seconds until unit starts to alarm. During testing, you will see and hear the following sequence:

1. The Horn will sound 3 beeps, pause, 3 beeps. The Power/Silence LED flashes RED.
2. The built-in test switch accurately tests the unit's operation as required by Underwriters Laboratories, Inc. (UL). NEVER use smoke exhaust! Exhaust may cause permanent damage and voids your warranty.
3. DO NOT connect the Alarm when the horn is sounding. Exposure at close range may be harmful to your hearing. When testing, step away when horns start sounding.

HOW TO INSTALL THIS ALARM
IMPORTANT!
This combination Smoke/CO Alarm was designed to be mounted on the ceiling or wall. It is not a tabletop device. You must install this device on the ceiling or wall as outlined below. Read "Where To Install This Alarm" before starting. Tools you will need: pencil, drill with 3/16" or 5/8mm drill bit, flathead screwdriver, hammer.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

IMPORTANT!
If you want to lock the battery compartment, or lock the Smoke/CO Alarm to the mounting bracket, please read the "Optional Locking Features" section located at www.firstalert.com. You can also make the Alarm tamper resistant by using the tamper-resistant screws.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

CAUTION!
Do not connect this unit to any other alarm or auxiliary device. It is a single-station unit that cannot be linked or daisy-chained. Connecting anything else to this unit may prevent it from working properly.
Do not install this unit over an electrical junction box. Air currents around junction boxes can prevent smoke from reaching the sensing chamber and prevent the unit from alarming. Only AC powered units are intended for installation over junction boxes.

RESET DEVICE
If the device is powered up with the test button held down for 10+ seconds, the device will reset all Z-Wave settings and leave the network.
Upon completion of the Reset operation, the LED will glow and the horn will sound for ~1 second. Please use this procedure only when the network primary controller is missing or otherwise inoperable.

NOTE: The device will not remain awake after resetting and will go into standby mode.
PROCEDURE TO MANUALLY WAKE-UP THE DEVICE
To manually wake-up the device, slide the battery door open wait for ~5 seconds and then slide the battery door closed. Upon wake-up, the device will send the wake-up notification.

DSK LOCATION ON THE PRODUCT
Device Specific Key (DSK) is available at the time an S2 device is added to a Z-Wave network. The QR code and the 5-digit DSK PIN can be found on the product nameplate which is located on the back of the product. The Full DSK string can be found on the product insert, available inside the product packaging.

For more information on Z-Wave specifications, visit www.firstalert.com/zwaveinfo.

REGULAR MAINTENANCE
This unit has been designed to be as maintenance-free as possible, but there are a few simple things you must do to keep it working properly.

- Test it at least once a week.
- Clean the Smoke/CO Alarm at least once a month; gently vacuum the outside of the Smoke/CO Alarm using your household vacuum's soft brush attachment. A can of clean compressed air (sold at computer or office supply stores) may also be used. Follow manufacturer instructions for use. Test the Smoke/CO Alarm. Never use water, cleaners or solvents since they may damage the unit.
- If the Smoke/CO Alarm becomes contaminated by excessive dirt, dust or grime, and cannot be cleaned to avoid unwanted alarms, replace the unit immediately.
- Relocate the unit if it sounds frequent unwanted alarms. See "Where This Alarm Should Not Be Installed" for details.

Choosing a replacement battery.
This Smoke/CO Alarm requires two standard AA batteries. The following batteries are acceptable as replacements: Energizer E91, Duracell MN1500/LR6. These batteries are available at many local retailers.

WARNING!
Always use the exact batteries specified by this User's Manual. DO NOT use rechargeable batteries. Clean the battery contacts and also those of the device prior to battery installation. Install batteries correctly with regard to polarity (+ and -). These fuels include: Wood, coal, charcoal, oil, natural gas, gasoline, kerosene, and propane.

Common appliances are often sources of CO. If they are not properly maintained, are improperly ventilated, or malfunction, CO levels can rise quickly. CO is a real danger now that homes are more energy efficient. Air-tight homes with good insulation, sealed windows, and other weatherproofing can "trap" CO inside.

SYMPTOMS OF CO POISONING
These symptoms are related to CO POISONING and should be discussed with ALL household members, including children, infants, unborn babies, pregnant mothers, or the elderly adult can be more quickly and severely affected by CO. If you experience even mild symptoms of CO poisoning, consult your doctor immediately!

WARNING!
• Keep battery out of reach of children. In the event a battery is swallowed, immediately contact your poison control center, your physician, or the National Battery Ingestion hotline at 1-800-325-3333 as serious injury may occur.

IMPORTANT!
Actual battery service life depends on the Smoke/CO Alarm and the environment in which it is installed. All the batteries specified above are acceptable replacement batteries for this CO Alarm. Regardles of the battery type, the suggested replacement battery should be replaced immediately once the unit starts "chirping" (the "low battery warning").

To replace the batteries (without removing Alarm from the ceiling or wall):

1. Open the battery compartment.
2. Press tabs A and B as shown in the diagram and remove the old batteries.
3. Insert the new batteries, making sure they snap completely into the battery compartment. Match the terminals on the ends of the batteries with the terminals on the unit.
4. Close the battery compartment, and then test the unit by pressing the Test/Silence button.

IF YOUR SMOKE/CO ALARM SOUNDS
WHAT TO DO FIRST-IDENTIFY THE TYPE OF ALARM

Type of Alarm What You See and Hear

Carbon Monoxide (CO) CO LED: Flashes Red
Horn: 4 beeps, pause, 4 beeps, pause
Power/Smoke LED: Off

Smoke Power/Smoke LED: Flashes Red
Horn: 3 beeps, pause, 3 beeps, pause
CO LED: Off

IF THE CO ALARM SOUNDS
"ALARM-MOVE TO FRESH AIR"
If you hear the CO alarm horn and the CO red light is flashing, move everyone to a source of fresh air. DO NOT remove the batteries!

WARNING!
Activation of your CO Alarm indicates the presence of carbon monoxide (CO) which is a health hazard. Carbon monoxide levels below 30 ppm are considered safe for average, healthy adults.

IF THE CO ALARM SIGNAL SOUNDS:

1. Operate the Test/Silence button.
2. Call your emergency services, fire department or 911. Write down the number of your local emergency service here:

3. Immediately move to fresh air—outdoors or by an open door or window. Do a head count to check that all persons are accounted for. Do not re-enter the premises, or move away from the open door or window until the emergency services responder has arrived, the premises have been aired out, and your CO Alarm remains in its normal condition.

4. After following steps 1-3, if your CO Alarm reactivates within a 24-hour period, repeat steps 1-3 and call a qualified appliance technician to investigate for sources of fuel-burning equipment and appliances, and inspect for proper operation of this equipment. If problems are identified during this inspection have the equipment serviced immediately. Note any combustion equipment not inspected by the technician, and consult the manufacturers' instructions, or contact the manufacturers directly, for more information about CO safety and this equipment. Make sure that motor vehicles are not, and have not, been operating in an attached garage or adjacent to the residence. Write down the number of a qualified appliance technician here:

NOTE: A qualified appliance technician is defined as "a person, firm, corporation, or company that either in person or through a representative, is engaged in and responsible for the installation, testing, servicing, or replacement of heating, ventilation, air conditioning (HVAC) equipment, combustion appliances and equipment, and/or gas fireplaces or other decorative combustion equipment."

IF THE SMOKE ALARM SOUNDS
RESPONDING TO AN ALARM

WARNING!
• If the unit alarms and you are not testing the unit, it is warninging you of a potentially dangerous situation that requires your immediate attention. NEVER ignore any alarm. Ignoring the alarm may result in injury or death.

• Never remove the batteries from a battery operated Smoke/CO Alarm to stop an unwanted alarm (caused by cooking smoke, etc.). Removing batteries disables the alarm so it cannot sense smoke, and removes your protection. Instead open a window or fan the smoke away from the unit. The alarm will reset automatically. CO Alarms are not designed to sense gas, heat, or flames.

• If the unit alarms get everyone out of the house immediately.

WHAT TO DO IN CASE OF FIRE
Don't panic, stay calm. Follow your family escape plan. Get out of the house as quickly as possible. Don't stop to get dressed or collect anything. Feel doors with the back of your hand before opening them. If a door is cool, open it slowly. Don't open a hot door. Keep doors and windows closed, unless you must escape through them. Cover your nose and mouth with a cloth (generally damp). Talk short, shallow breaths. Meet at your planned meeting place outside your home, and do a head count to make sure everybody got out safely.

Call the Fire Department as soon as possible from outside. Give your address, then your name. Never go back inside a burning building for any reason. Contact your Fire Department for ideas on making your home safer.

WARNING!
Alarms have various limitations. See "General Limitations of Smoke/CO Alarms" for details.

USING THE SILENCE FEATURES

WARNING!
Remove the batteries to quiet an unwanted alarm. Removing the batteries disables the alarm and removes your protection.

The Silence Feature is intended to temporarily silence the horn while you identify and correct the problem. Do not use the Silence Feature in emergency situations. It will not correct a CO problem or extinguish a fire.

The Silence Feature can temporarily quiet an unwanted alarm for several minutes. Press the Test/Silence button on the alarm cover for at least 3-5 seconds. After the Test/Silence button is released, the Red LED blinks during the silence mode.

When the Smoke Alarm is Silenced When the CO Alarm is Silenced

The Smoke Alarm will remain silent for up to 15 minutes, then return to normal operation. If the smoke has not cleared—or continues to increase—the device will go back into alarm.

The CO alarm will remain silent for up to 4 minutes. After 4 minutes, if CO levels remain potentially dangerous the horn will start sounding again.

SILENCING THE LOW BATTERY WARNING
This silence feature can temporarily quiet the low battery warning "chirp" for up to 8 hours. Press the Test/Silence button on the alarm cover. Once the low battery warning "chirp" silence feature is activated, the unit continues to flash the Green light once a minute for 8 hours. After 8 hours, the low battery "chirp" will resume. Replace the batteries as soon as possible; this unit will not operate without battery power.

To deactivate this feature: Press the Test/Silence button again. The unit will go into Test Mode and the low battery warning will resume (LED flashes and unit sounds "chirp" once a minute).
