PoE Integrity and the 10G Backbone

Welcome to the Powerhouse Alliance **PowerCast** training podcast featuring **Intellinet**. Join our Host, Gary Usher, along with **Pete Hollenhorst of Intellinet**, as we discuss PoE Integrity and the 10G Backbone.

Training topics:

- **Eliminating the "Ghost" Service Call:** How Self-Healing PoE (PDM/Watchdog) automates the "unplug and plug it back in" fix, keeping your technicians on billable installs instead of free warranty truck rolls.
- **Future-Proofing the 10G Backbone:** Moving beyond 1Gbps bottlenecks to support the high-bandwidth requirements of Wi-Fi 7 access points and latency-free AV-over-IP deployments.
- **Precision Rack Engineering:** Leveraging FlexiBoot slim-profile cabling to maximize airflow and create "Instagram-worthy" racks that are easier to service and troubleshoot.
- **The Physics of PoE Integrity:** Why 100% Pure Bare Copper is the only specification for high-wattage PoE++ (90W) to prevent heat-related failures and meet NEC/UL safety standards.
- **Protecting Your Project Margin:** How the Intellinet/Power House Alliance partnership provides professional-grade reliability with the price protection you need to stay competitive and profitable.
